

CHEMICAL CLEANSING TREATMENT

HSG282 states a hot tub should be checked daily however we understand this isn't always possible, if you still wish to offer a safe place for your guests, a more regular deep clean service can be put in place and at a reduced cost too if you sign up for our quarterly programme.

CHEMICAL FLUSH

Step 1 - Removes any bio film which is coating the internal plumbing, no matter how much chlorine you use this builds up over time. when we remove the slime layer it then exposes the harmful bacteria underneath.

Step 2 - A second chemical is then added to kill any of the exposed bacteria in it's tracks.

07816 946878

- Includes full water change and a full vacuum of all hoses.
- We leave the spa chemically balanced and heating ready for the next guests.
- *Invoiced after the works complete ensuring complete customer satisfaction.*
